### WHAT IS CONNECTED RIDING?

Connected Riding® transforms how we see and feel our horses. Connected Riding changes how we experience and use our bodies as riders.

Connection is the dynamic, reciprocal, elastic sensation between horses and riders. Connected Riding® is the synchronization of movement between rider and horse. It provides a 3-way approach to improving horse and rider performance.

Connected Movement

### CONNECTED RIDING:

\*Changes how we see our horses and how we perceive and feel our bodies.

\*Improves a horse's way of going by increasing elasticity, balance, and responsiveness.

\*Establishes reciprocal and dynamic communication between horse and rider without force and bracing which is far more than the result of obedience and learned behavior.

\*Applies to all horses in all riding disciplines by improving functional movement regardless of the job or level they encompass.
